

## INDEX TO VOL. CXLIII. (A).

- Adam (N. K.) and Harding (J. B.) Structure of surface films. XX.—Surface potential measurements on nitriles, 104.
- Allsopp (C. B.) Refractive dispersion of organic compounds. IV.—Cyclohexene and 1:3-Cyclohexadiene, 618.
- Alpha-particles, bombardment of the heavy isotope of hydrogen (Rutherford and Kempton), 724.
- Alpha-particles, measurements of relative velocities (Briggs), 604.
- Andrews (J. P.) *See* Robinson, Andrews and Irons.
- Antimonial analogues of the acridine series (Morgan and Davies), 38.
- Armstrong (G.), Himsworth (F. R.) and Butler (J. A. V.) Kinetics of electrode processes. III.—Behaviour of platinum and gold electrodes in sulphuric acid and alkaline solutions containing oxygen, 89.
- Atomic constants deduced from secondary cathode ray measurements (Robinson and others), 48.
- Bailey (V. A.) Interaction between several species of hosts and parasites, 75.
- Bell (J.) *See* Bone and Bell.
- Bell (R. P.) Acid catalysis in non-aqueous solvents. I.—The rearrangement of N-bromo-acetanilide, 377.
- Benzoquinone, *p*-termolecular polymerization products (Erdtman), 228.
- Bismuth, spark spectra (Crawford and McLay), 540.
- Bismuth, thermal expansion of, by X-ray measurements (Jay), 465.
- Bone (W. A.) and Bell (J.) Flame speeds during the "inflammation" of moist carbonic oxide-oxygen mixtures, I.
- Bone (W. A.), Haffner (A. E.) and Rance (H. F.) The slow combustion of ethylene, 16.
- Born (M.) Quantum theory of the electromagnetic field, 410.
- Braddick (H. J. J.) and Ditchburn (R. W.) Continuous absorption of light in caesium vapour, 472.
- Bradford (B. W.) *See* Finch and others.
- Briggs (G. H.) Measurements of relative velocities of the  $\alpha$ -particles from radon, radium A and radium C', 604.
- Bromo-acetanilide rearrangement in acid catalysis (Bell), 377.
- Butler (J. A. V.) *See* Armstrong, Himsworth and Butler.
- Caesium, nucleus, mechanical moment (Jackson), 455.
- Caesium vapour, continuous absorption of light (Braddick and Ditchburn), 472.
- Carbonic oxide-oxygen mixtures, flame speeds during "inflammation" of moist (Bone and Bell), I.
- Catalysis, acid in non-aqueous solvents (Bell), I, 377.
- Cathode ray measurements, atomic constants deduced from secondary (Robinson and others), 48.
- Coefficients of gases, dielectric (Watson and others), 558.
- Coefficients, volume, of expansion of gases at pressures below one metre (Coppock and Whytlaw-Gray), 487.
- Collens (H.) *See* Schonland and Collens.
- Colloidal electrolytes, aggregation of, from transport number and conductivity measurements (Robinson and Moilliet), 630.
- Combustion, gaseous, in electric discharges (Finch and others), 482.
- Coppock (J. B. M.) and Whytlaw-Gray (R.) Volume coefficients of expansion of several gases at pressures below one metre, 487.

- Corrosion and co-ordination (Riley), 399.
- Crawford (M. F.) and McLay (A. B.) Spark spectra of bismuth, Bi III and Bi II, 540.
- Davies (G. R.) *See* Morgan and Davies.
- Dickins (B. G.) Effect of accommodation on heat conduction through gases, 517.
- Diquinones, rearrangement of oxidation-reduction type (Erdtman), 223.
- Dipole moments, electric, and determination of valency angles (Hampson and others), 147.
- Ditchburn (R. W.) *See* Braddick and Ditchburn.
- Dye (D. W.) and Essen (L.) Valve maintained tuning fork as a primary standard of frequency, 285.
- Eddington (Sir A.) Masses of proton and electron, 327.
- Electromagnetic field, quantum theory (Born), 410.
- Electrode processes, kinetics, III (Armstrong and others), 89.
- Electron, mass of (Eddington), 327.
- Ellis (C. D.)  $\gamma$ -rays of radium (B + C) and of thorium (C + C'), 350.
- Energy, latent, remaining in a metal after cold working (Taylor and Quinney), 307.
- Equilibrium, cathodic water-gas (Finch and others), 482.
- Erdtman (H. G. H.) Studies on formation of complex oxidation and condensation products of phenols. A contribution to the investigation of the origin and nature of humic acid, I-IV, 177, 191, 223, 228.
- Essen (L.) *See* Dye and Essen.
- Ethylene, slow combustion (Bone and others), 16.
- Farmer (R. H.) *See* Hampson, Farmer and Sutton.
- Films, reaction kinetics (Fosbinder and Rideal), 61.
- Films, structure of surface (Adam and Harding), 104.
- Finch (G. I.), Bradford (B. W.) and Greenshields (R. J.) Gaseous combustion in electric discharges. IX.—The cathodic water-gas equilibrium, 482.
- Fisk (J. B.) Calculation of internal conversion coefficients of  $\gamma$ -rays, 674.
- Flame speeds during the "inflammation" of moist carbonic oxide-oxygen mixtures (Bone and Bell), 1.
- Fosbinder (R. J.) and Rideal (E. K.) Reaction kinetics in films. The hydrolysis of  $\gamma$ -stearolactone, 61.
- Frequency, primary standard (Dye and Essen), 285.
- Gamma-rays, calculation of internal conversion coefficients (Fisk), 674.
- Gamma radiation, anomalous absorption of high energy (Gray and Tarrant), 681, 706.
- Gamma-rays of radium and thorium (Ellis), 350.
- Gray (L. H.) and Tarrant (G. T. P.) Phenomena associated with the absorption of high energy gamma radiation, II and III, 681, 706.
- Greenshields (R. J.) *See* Finch and others.
- Griffiths (J. H. E.) The mean lives of excited neon atoms, 588.
- Haffner (A. E.) *See* Bone, Haffner and Rance.
- Hampson (G. C.), Farmer (R. H.) and Sutton (L. E.) The determination of the valency angles of the oxygen and sulphur atoms and the methylene and sulphony groups, from electric dipole moments, 147.
- Harding (J. B.) *See* Adam and Harding.
- Hartree (D. R.) Results of calculations of atomic wave functions. II.—Results for  $K^+$  and  $Cs^+$ , 506.
- Heat conduction through gases, effect of accommodation (Dickins), 517.

- Himsworth (F. R.) *See* Armstrong, Himsworth and Butler.
- Hopkins (Sir F. Gowland) Presidential address, 242.
- Hosts and parasites, interaction between several species (Bailey), 75.
- Hydrogen, heavy isotope, bombardment by  $\alpha$ -particles (Rutherford and Kempton), 724.
- Irons (E. J.) *See* Robinson, Andrews and Irons.
- Jackson (C. V.) Wave-lengths of the red lines of neon and their use as secondary standards, 124.
- Jackson (D. A.) Mechanical moment of the nucleus of caesium, 455.
- Jay (A. H.) Thermal expansion of bismuth by X-ray measurements, 465.
- Kempton (A. E.) *See* Rutherford and Kempton.
- Keplerian systems in quantum mechanics, method of calculating the mean value of  $1/r^3$  (Van Vleck), 679.
- Kinetics of electrode processes, part III (Armstrong and others), 89.
- Kinetics, reaction, in films (Fosbinder and Rideal), 61.
- Light, continuous absorption in caesium vapour (Braddick and Ditchburn), 472.
- Lightning, progressive (Schonland and Collens), 654.
- McLay (A. B.) *See* Crawford and McLay.
- Mandlekar (M. R.) *See* Townend and Mandlekar.
- Metal, latent energy in, after cold working (Taylor and Quinney), 307.
- Moilliet (J. L.) *See* Robinson and Moilliet.
- Morgan (G. T.) and Davies (G. R.) Antimonial analogues of the acridine series. Dihydrostibacridines, 38.
- Napthoquinone,  $\alpha$ -, termolecular polymerization products (Erdtman), 228.
- Neon atoms, mean lives of excited (Griffiths), 588.
- Neon, wave-lengths of the red lines and their use as secondary standards (Jackson), 124.
- NH,  $\lambda$ 3240 band (Pearse), 112.
- Oxygen atoms, determination of valency angles from electric dipole moments (Hampson and others), 147.
- Parasites and hosts, interaction between several species (Bailey), 75.
- Pearse (R. W. B.)  $\lambda$ 3240 band of NH, 112.
- Pentane-air mixtures, influence of pressure on spontaneous ignition (Townend and Mandlekar), 168.
- Phenols, formation of complex oxidation and condensation products (Erdtman), 177, 191, 223, 228.
- Presidential address (Hopkins), 242.
- Proton, mass of (Eddington), 327.
- Quantum theory of the electromagnetic field (Born), 410.
- Quinney (H.) *See* Taylor and Quinney.
- Quinones coupling to diphenyl derivatives (Erdtman), 191.
- Quinones, reactivity of simple monocyclic (Erdtman), 177.
- Radium A and C', velocity of  $\alpha$ -particles from (Briggs), 604.
- Radium,  $\gamma$ -rays of (Ellis), 350.
- Radon, velocity of  $\alpha$ -particles from (Briggs), 604.
- Ramaswamy (K. L.) *See* Watson and others.
- Rance (H. F.) *See* Bone, Haffner and Rance.
- Rao (G. Gundy). *See* Watson and others.

- Refractive dispersion of organic compounds (Allsopp), 608.
- Rideal (E. K.) *See* Fosbinder and Rideal.
- Riley (H. L.) Corrosion and co-ordination, 399.
- Robinson (C.) and Moilliet (J. L.) Aggregation of colloidal electrolytes from transport number and conductivity measurements: some benzidine dyes, 630.
- Robinson (H. R.), Andrews (J. P.) and Irons (E. J.) Atomic constants deduced from secondary cathode ray measurements, 48.
- Rutherford (Lord) and Kempton (A. E.) Bombardment of the heavy isotope of hydrogen by  $\alpha$ -particles, 724.
- Schonland (B. F. J.) and Collens (H.) Progressive lightning, 654.
- Sea-water, electrical properties for alternating currents (Smith-Rose), 135.
- Sen-Gupta (P. K.) Absorption spectra of the sulphides of zinc, cadmium and mercury from  $\lambda 7000$ –1900, and the heat of dissociation of sulphur, 438.
- Smith (D. B.) and Southwell (R. V.) Stresses induced by flexure in a deep rectangular beam, 271.
- Smith-Rose (R. L.) The electrical properties of sea-water for alternating currents, 135.
- Southwell (R. V.) *See* Smith and Southwell.
- Spectra, absorption, of the sulphides of zinc, etc. (Sen-Gupta), 438.
- Spectra, spark, of bismuth Bi III and Bi II (Crawford and McLay), 540.
- Spectrum of NH,  $\lambda 3240$  band (Pearse), 112.
- Stresses in a deep rectangular beam induced by flexure (Smith and Southwell), 271.
- Sulphides, absorption spectra (Sen-Gupta), 438.
- Sulphur atoms, determination of valency angles from electric dipole moments (Hampson and others), 147.
- Sulphur, heat of dissociation (Sen-Gupta), 438.
- Sutton (L. E.) *See* Hampson, Farmer and Sutton.
- Tarrant (G. T. P.) *See* Gray and Tarrant.
- Taylor (G. I.) and Quinney (H.) Latent energy remaining in a metal after cold working, 307.
- Thorium,  $\gamma$ -rays (Ellis), 350.
- Toluquinone, termolecular polymerization products (Erdtman), 228.
- Townend (D. T. A.) and Mandlekar (M. R.) Influence of pressure on the spontaneous ignition of inflammable gas-air mixtures. II.—Pentane-air mixtures, 168.
- Tuning fork, valve, maintained as primary standard of frequency (Dye and Essen), 285.
- Valency angles of the oxygen and sulphur atoms and methylene and sulphony groups, determination from electric dipole moments (Hampson and others), 147.
- Van Vleck (J. H.) A new method of calculating the mean value of  $1/r^3$  for Keplerian systems in quantum mechanics, 679.
- Watson (H. E.), Gundu Rao (G.) and Ramaswamy (K. L.) Dielectric coefficients of gases, II, 558.
- Wave functions, atomic, results of calculations (Hartree), 506.
- Williams (E. J.) Anomalous dispersion and absorption of X-rays, 358.
- Whytlaw-Gray (R.) *See* Coppock and Whytlaw-Gray.
- X-rays, anomalous dispersion and absorption (Williams), 358.
- X-ray measurements, thermal expansion of bismuth (Jay), 465.
