Mathematical and Physical Sciences Series A
No 1422 1 March 1966 Vol 290

A DISCUSSION ON RECENT ADVANCES IN THE TECHNIQUE
OF SEISMIC RECORDING AND ANALYSIS

Published by the Royal Society
Burlington House
Piccadilly
London, W. 1

Price £1. 2s. 6d. (U.S. \$3.35)

NOTICE TO AUTHORS AND COMMUNICATORS

No scientific communication or paper is considered, read or published by the Royal Society unless it has been communicated by a Fellow or Foreign Member of the Society whose duty it shall be 'to satisfy himself that any letter, report, or other paper which he may communicate is suitable to be read before the Society' (Statute 64).

In view of the necessity for economy, authors of papers submitted to the Royal Society are required to put their communications in as concise a form as possible. MSS should be typewritten, carefully revised and properly prepared as copy for press. It is desirable that authors should retain copies of their MSS for reference.

The communicator shall also be responsible for the suitable presentation of the MS and for its grammatical correctness. The Secretaries reserve the right to return a MS to the author for retyping or other adequate preparation if it is received prepared or presented in a state which would make it difficult for the compositor to set.

Every paper must be accompanied by *three copies* of a brief summary not exceeding 5% of the length of the paper or one page of 'Proceedings'.

Authors are requested to send in all drawings, diagrams or other illustrations in a state suitable for direct photographic reproduction. They should be drawn on a large scale in Indian ink on Bristol board or on good quality tracing linen or tracing paper, with temporary lettering in blue pencil. Great care should be exercised in selecting only those that are essential. If unsatisfactory drawings are submitted authors may be required to have them redrawn by a professional artist.

It is to be understood that papers are only accepted on the assumption that authors are prepared to conform with the instructions to authors prescribed by the Royal Society.

Copies of *Notes on the preparation of papers to be communicated to the Royal Society* will be sent to communicators and authors of papers on application to the Executive Secretary.

SUBSCRIPTIONS TO THE 'PROCEEDINGS'

Subscriptions may be placed with the Royal Society, *payable in advance of publication* of the four parts comprising the volume, at the following rates:

Volume in parts as issued	£4. (post free); in the U.S.A. \$12.00
Cloth bound volume	£4. 7s. 6d. (post free); in the U.S.A. \$13.15

A DISCUSSION ON RECENT ADVANCES IN THE TECHNIQUE
OF SEISMIC RECORDING AND ANALYSIS

ORGANIZED BY SIR EDWARD BULLARD, F.R.S.,
AND SIR WILLIAM PENNEY, F.R.S.

(Discussion held 28 and 29 January 1965—
MSS received 8 June 1965)

CONTENTS

	PAGE
SIR WILLIAM PENNEY, F.R.S. Introduction	288
J. A. HUDSON AND L. KNOPOFF The nature of seismic noise	290
B. J. HINDE AND D. I. GAUNT Some new techniques for recording and analysing microseisms	297
P. A. BLUM, R. GAULON, G. JOBERT AND N. JOBERT On ultra-long period seismometers operating under vacuum	318
G. C. ANDERSON, A. S. BENNETT, R. PARKS AND P. L. WILLMORE Advances in instrumentation	323
F. E. WHITEWAY The use of arrays for earthquake seismology	328
M. M. BACKUS Teleseismic signal extraction	343
R. A. FROSCH AND P. E. GREEN, JR The concept of a large aperture seismic array	368
H. I. S. THIRLAWAY Interpreting array records: explosion and earthquake <i>P</i> wavetrains which have traversed the deep mantle	385
E. W. CARPENTER A quantitative evaluation of teleseismic explosion records	396
F. HOLZER Calculation of seismic source mechanisms	408
N. A. ANSTEY AND W. E. LERWILL Correlation in real time	430
J. M. DENOYER <i>S</i> waves generated by small seismic sources	448
A. FLUENDY, D. M. MCGREGOR AND P. L. WILLMORE The collection of seismic station readings	461
R. A. PHINNEY Discussion	467
SIR EDWARD BULLARD, F.R.S. Concluding remarks	472
