## INDEX TO VOLUME 353 (A)

### Author index

Barndorff-Nielsen, O. Exponentially decreasing distributions for the logarithm of particle size, 401.

Bowden, G. J. A unifying theory for effective field models in magnetism, 563.

Catlow, C. R. A. Point defect and electronic properties of uranium dioxide, 533.

Chan, D. & Richmond, P. Van der Waals forces for mica and quartz: calculations from complete dielectric data, 163.

Childs, T. H. C. The persistence of roughness between surfaces in static contact, 35.

Davies, P. B., Russell, D. K., Thrush, B. A. & Radford, H. E. Analysis of the laser magnetic resonance spectra of \( \text{NH}_2(\tilde{X}^2\text{B}_1) \), 299.

Davies, P. C. W. The thermodynamic theory of black holes, 499.

Davis, A. M. J. & Leppington, F. G. The scattering of electromagnetic surface waves by circular or elliptic cylinders, 55.

Eltayeb, I. A. & Kumar, S. Hydromagnetic convective instability of a rotating, self-gravitating fluid sphere containing a uniform distribution of heat sources, 145.

Faber, T. E. A continuum theory of disorder in nematic liquid crystals. II. Intermolecular correlations, 261.

Faber, T. E. A continuum theory of disorder in nematic liquid crystals. III. Nuclear magnetic relaxation, 277.

Freedman, P. A. See Till, Freedman, Tuckett & Jones.

Hong, N.-S., Jones, A. R. & Weinberg, F. J. Doppler velocimetry within turbulent phase boundaries, 77.

Hunter, G. & Kuriyan, Mary. Proton collisions with hydrogen atoms at low energies: quantum theory and integrated cross-sections, 575.

Jones, A. R. See Hong, Jones & Weinberg.

Jones, H. The mechanics of vibrating flames in tubes, 459.

Jones, W. J. See Till, Freedman, Tuckett & Jones.

Keesing, R. G. W. See Heddle, Keesing & Parkin.

[ 591 ]
Author index

Kumar, S. See Eltayeb & Kumar.
Kuriyan, Mary. See Hunter & Kuriyan.

Leppington, F. G. See Davis & Leppington.
Lu, K. T. On the interaction between the 5s-p and 4d-p channels in Sr I, 431.
Luckhurst, G. R. & Zannoni, C. Line broadening in the electron resonance spectra of
spin probes dissolved in anisotropic media: the effect of nuclear spin quantization,
87.

Macpherson, A. K. Thermal stability in a rotating spherical fluid shell with non-uniform
heating, 349.
Mansfield, E. H. Analysis of wrinkled membranes with anisotropic and nonlinear elastic
properties, 475.
Miles, J. W. Asymptotic eigensolutions of Laplace’s tidal equation, 377.
Modarress, D. See Holt & Modarress.

Parkin, A. See Heddle, Keesing & Parkin.
Patel, M. H. On turbulent boundary layers in oscillatory flow, 121.
Pepper, M. The Anderson transition in silicon inversion layers: the origin of the random
field and the effect of substrate bias, 225.
Percival, I. C. Planetary atoms, 289.
Perram, J. W. & Smith, E. R. Competitive adsorption via the Percus–Yevick approxima-
tion, 193.

Radford, H. E. See Davies (P.B.), Russell, Thrush & Radford.
Rhodes, D. R. A reactance theorem, 1.
Richmond, P. See Chan & Richmond.
Rogers, A. J. The electrogyration effect in crystalline quartz, 177.
Rosendorff, S. A modified approach to Glauber approximation for particle–atom
collisions, 11.

Sastri, K. S. See Vajravelu & Sastri.
Smith, E. R. See Perram & Smith.

Thomas, J. M. See Evans & Thomas.
Thrush, B. A. See Davies (P.B.), Russell, Thrush & Radford.
Sisam spectrometer for the near infrared, 421.
Tuckett, R. P. See Till, Freedman, Tuckett & Jones.

Vajravelu, K. & Sastri, K. S. Correction to ‘Free convection effect on the oscillatory
flow past an infinite vertical, porous plate with constant suction. I’ (Soundalgekar,
V. M. 1973), 221.

Weinberg, F. J. See Hong, Jones & Weinberg.
Welberry, T. R. Solution of crystal growth disorder models by imposition of sym-
metry, 363.

Subject index

Anderson transition in Si inversion layers, 225.
Atoms, doubly excited, 289.
Atoms, semiclassical theory, 289.

Black hole thermodynamics, 499.

Competitive adsorption, 193.
Contact of rough surfaces, 35.
Crystal growth disorder models, 363.

Diamond, chemisorption of oxygen on, 103.

Effective field theories in magnetism, 563.
Einstein–Maxwell equations, a class of exact interior solutions of the, 523.
Electrogyration in quartz, 177.
Electron spin relaxation; orientation dependence in liquid crystals, 87.

Free convection, 221.

Glauber approximation for particle–atom collisions, 11.
Graphite, chemisorption of oxygen on, 103.

Hydrogen atom–proton collision cross-sections, 575.
Hyperbolic distributions, 401.

Inversion layers; Anderson transition in, 225.

Laminar boundary layer separation in three dimensions, 319.
Laplace’s tidal equations, asymptotic eigensolutions of, 377.
Laser Doppler velocimetry in turbulent systems, 77.
Laser magnetic resonance spectra of NH$_3$(X$^2$B$_1$), 299.
Liquid crystals; orientational electron spin relaxation, 87.

Magneto-hydrodynamics, 145.
Method of integral relations for three dimensional laminar flows, 319.
Mica & quartz: van der Waals forces between, 163.

Nematic liquid crystals, disorder in, 247.
Nematic liquid crystals, intermolecular correlations in, 261.
Nematic liquid crystals, nuclear magnetic relaxation in, 277.

Oscillating turbulent boundary layers, 121.
Oscillatory flow, 221.
Particle statistics, 401.
Perturbed strontium atom principal series, 431.
Protein, towards synthesis, 441.

Reactance theorem, 1.
Reflexion of electromagnetic surface waves, 55.
Rotating fluid shell stability, 349.
Roughness persistence in static contact, 35.

Scattering cross-sections for proton hydrogen atom collisions, 575.
Shear flow effects on fluid shell stability, 349.
Sisam spectrometer for the near infrared, single/double-pass, 421.
Spectra of NH\textsubscript{3}(\tilde{X}\textsuperscript{2}B\textsubscript{1}), laser magnetic resonance, 299.
Sr i principal series, 431.
Symmetry and growth disorder, 363.

Thermodynamics of black holes, 499.
Turbulence measurement by laser Doppler velocimetry, 77.
Turbulent boundary layers in oscillatory flow, 121.

Uranium dioxide: point defect and electronic properties, 533.

Van der Waals forces: mica & quartz, 163.
Vibrating flames, the mechanics of, 459.
Voltage measurement, 177.

Wrinkled membranes, 475.
