

HIGHLIGHTS OF BRITISH SCIENCE

'Britain has a great tradition in natural science. From the time of the so-called scientific revolution of the mid-seventeenth century with the foundation of the Royal Society at the heart of it, British scientists have been in the forefront of advances not merely in fundamental science but also in its application to the practical problems of everyday life. Science, of course, knows no national boundaries and it owes much of its progress and vitality to the free exchange of information and ideas between scientists in all countries. It is nevertheless true that, for a variety of reasons, some countries, of which Britain is one, have made contributions out of all proportion to their physical size and population. Today we are in the midst of a worldwide economic recession which has indeed affected Britain more severely than some other highly industrialized nations. Since economic progress and with it our living standards depend nowadays almost entirely on advances in science and in technology based upon it, it is perhaps not surprising that some members of the public should wonder whether we have fallen behind other nations and whether our expenditure on science and scientific research is being misdirected. Nothing could be further from the truth. Our record during the past twenty-five years is an enviable one and our scientific research is vigorous as ever, flushed with success and full of promise. Britain has made and continues to make outstanding contributions in many and diverse fields of science. Some of these are set out in this book and it is my hope that its contents will not only stimulate appreciation of some highlights in British science but will indicate also its promise for the future.'

Extract from Lord Todd's Preface

CONTENTS

Discoveries about the universe
Recent advances in weather forecasting
Research in seas and oceans
Contributions of scientific discoveries to increases in agricultural productivity
Science and the development of nuclear energy
The jubilant electron
Developments in electron microscopy and microanalysis
Chemistry in microtime
The intracellular electrode: 25 years of research in cellular electro-physiology
Molecules of life
High blood pressure: the evolution of drug treatment: British contribution

240 pages 44 plates

ISBN 0 85403 104 9

Price including packing and postage

£8.00 (U.K. addresses) £8.25 (overseas addresses)

PROCEEDINGS OF THE ROYAL SOCIETY, SERIES A

Number 1786

8 November 1982

Volume 384

CONTENTS

BROADBENT, E. G. & MOORE, D. W. The two-dimensional oscillations of straight vortex filaments with a power-law distribution of vorticity	<i>pages</i> 1–29
CHANDLER, G. S., FIGGIS, B. N., PHILLIPS, R. A., REYNOLDS, P. A., MASON, SIR RONALD & WILLIAMS, G. A. Spin density and bonding in the CoCl_4^{2-} ion in Cs_3CoCl_5 . III. The comparison of theory and experiment	31–48
FIGGIS, B. N., REYNOLDS, P. A. & MASON, SIR RONALD Spin density and bonding for the CoBr_4^{2-} ion in Cs_3CoBr_5 . A polarized neutron diffraction study	49–55
DAVIS, C. L., MASLEN, E. N. & VARGHESE, J. N. On exact analytical solutions for the few-particle Schrödinger equation. I. A perturbation study	57–88
DAVIS, C. L. & MASLEN, E. N. On exact analytical solutions for the few-particle Schrödinger equation. II. The ground state of helium	89–105
ATKINSON, C. The growth kinetics of ledges during phase transformations: multistep interactions	107–133
BURSILL, L. A., BLANCHIN, M. G. & SMITH, DAVID J. The nature and extent of disorder within rapidly cooled $\text{TiO}_{1.9985}$. [Plates 1–14]	135–155
CATLOW, C. R. A. & JAMES, R. Disorder in TiO_{2-x}	157–173
GROSCH, C. E. & SALWEN, H. Oscillating stagnation point flow	175–190
HIRST, L. L. & RAY, T. Symmetry analysis of states of ion pairs in crystals	191–203
FOOT, C. J., STACEY, D. N., STACEY, V., KLOCH, R. & LEŚ, Z. Isotope effects in the nuclear charge distribution in zinc	205–216
SAITO, T. & GLASS, I. I. Temperature measurements at an implosion focus	217–231
