Selection criteria

The criteria for selection are scientific excellence, originality and interest across disciplines within mathematical, physical and engineering sciences. The following types of papers will be considered:

- important, new research findings
- interesting reviews that shed new light on a particular subject or field
- short "Rapid Communications" (up to 10 printed pages)

All these will be published within 4 months of acceptance.

Papers of an interdisciplinary nature

The maximum limit is 20 printed pages (about 640 words or two figures per page). Papers over this limit will be considered, but will also be subject to page charges.

The Editors are responsible for all editorial decisions and they make these decisions based on the reports received from the referees and/or the Editorial Board members. Many more papers submitted are rejected than those published as we do not wish to waste space, and we give preference to those that present significant advances of broad interest. Submission of preliminary reports, of articles that merely confirm previous findings, and of articles that are likely to interest only small groups of specialists, is not encouraged. All articles are sent to Editorial Board members for an initial assessment of their suitability, and may be returned to authors without in-depth peer review if this assessment makes it seem unlikely that they will be accepted.

Editorial Board

D. J. Higham, Department of Mathematics, University of Strathclyde
A. Hinza, Department of Mechanical, Aerospace and Nuclear Engineering, Rensselaer Polytechnic Institute
C. Howls, School of Mathematics, University of Southampton
L. Hughston, Department of Mathematics, Imperial College London
J. W. Hutchinson, Division of Engineering and Applied Sciences, Harvard University
J. T. Jenkins, Department of Theoretical and Applied Mathematics, Cornell University
O. Jensen, School of Mathematical Sciences, University of Nottingham
R. Moxey, Mathematics Institute, University of Warwick
M. Lohnsroman, Centre for Nonlinear Dynamics, Bharathidasan University
P. P. Lindb, Department of Mechanical and Aerospace Engineering, University of California, San Diego
J. C. S. Lou, Department of Engineering, Brown University
D. McIntyre, School of Physics, University of Sydney
K. Nokura, Department of Applied Physics, Osaka City University
D. N. Nield, Chemical and Analytical Science Division, Oak Ridge National Laboratory
A. Norris, Department of Mechanical and Aerospace Engineering, Rutgers University
T. Palacios, ECMWF
D. Phillips, Department of Chemistry, Imperial College London
M. Plinta, Department of Physics, Imperial College London
J. R. Rice, Functional Genomics and Systems Biology, BHF T. Hunter Walton Research Center
B. Rustom, Department of Computing, Imperial College London
P. Sammonds, Department of Earth Sciences, University College London
J. Shang, Institute of Marine Science and Technology, Hong Kong University of Science and Technology
J. Strangarathnam, Department of Mechanical Engineering, University of Bath
A. Sowa, Department of Mechanical Engineering, University of New Brunswick
S. Sparks, IRS, Department of Earth Sciences, University of Bristol
D. M. A. Stuart, Department of Applied Mathematics and Theoretical Physics, University of Cambridge
Z. Suo, School of Engineering and Applied Sciences, Harvard University
A. Tate, Artificial Intelligence Applications Institute, University of Edinburgh
J. T. C. Liu, Department of Material Science and Technology, University of Cambridge
G. Wake, Institute of Innovation and Mathematical Sciences, University of Edinburgh
T. Wei, Dept. of Mechanical, Aerospace and Nuclear Engineering, Rensselaer Polytechnic Institute
R. Wang, Department of Mathematics, City University of Hong Kong
J. Woodhouse, Department of Earth Sciences, University of Oxford
N. Yao, Imaging and Analysis Center, University of California at Merced

Proc. R. Soc. A is published regularly online and in monthly print issues together with online articles. All articles are published regularly online and in monthly print issues. Along with all Royal Society journals, we are committed to archiving and providing perpetual access. Although papers are limited to eighteen journal pages in length, there is the facility for including Electronic Supplementary Material (ESM). Contents of the ESM might include details of mathematical derivations of equations, large tables of data and computer programs. However, the printed version must include enough detail to satisfy non-specialist readers. Supplementary data up to 10MB is placed on the Society’s website free of charge. Larger datasets must be deposited in recognised public domain databases by the author.

Electronic Submission details

The Royal Society’s electronic-submission and peer-review service provides Proc. R. Soc. A authors with the facility to submit their papers online. The service allows you to upload files in a reliable and user-friendly way, using a Web-based system. When your paper is received, an immediate acknowledgement is sent that details how you can track your contribution online.

For further information on the Society’s activities, please contact the following departments on the extensions listed by dialing +44 (0)20 7839 5561, or visit the Society’s Web site (royalsociety.org).

Research Support (UK grants and fellowships)
Research appointments: 2547
Science Advice
General enquiries: 2572
Science Communication
General enquires: 2572
International Exchanges (for grants enabling researchers to visit the UK and most other countries (except the USA))
Library and Information Services
Library/archive enquiries: 2606

The Royal Society, the national academy of science of the United Kingdom, is the cutting edge of scientific progress. We support many top young scientists, engineers and technologists, influence science policy, debate scientific issues with the public and much more. We are an independent, charitable body and derive our authoritative status from over 1340 Fellows and Foreign Members.

During 2010, we are celebrating the Royal Society’s 350th anniversary. As part of this, there will be an exciting programme of activities – exhibitions, lectures, conferences, a new book, a vast science festival on the South Bank in London, television and radio broadcasting and much, much more.

Our mission: to expand knowledge and further the role of science and engineering in making the world a better place.

The Royal Society’s strategic priorities are to:

- invest in future scientific leaders and innovation
- influence policymaking with the best scientific advice
- integrate science and mathematics education
- increase access to the best science internationally
- inspire an interest in the joy, wonder and excitement of scientific discovery.

GUIDANCE FOR AUTHORS

SUBSCRIPTIONS

In 2010 Proc. R. Soc. A is the 1384-0021(2011) will be published monthly. Further details of subscriptions may be obtained either by contacting our journal fulfilment agent, Portland Customer Services, Customer Service, Commerce Way, Clockhouse EDL, 84, tel: 0070-52 702; fax: +44 (0)20 7839 5561; email: subs@portland-services.com or by visiting our website at royalsociety.org/journals/subscriptions. The Royal Society is Registered Charity No. 207043.

GROWTH OF THE ROYAL SOCIETY

The Society has a growing membership, which now stands at over 16,000, of which about 3,000 are Fellows. Over the last 28 years, the Society has made major changes to improve the quality of its publications, and to disseminate its research findings more widely. The Society now has a strong presence in the media, and its website attracts over 5 million hits a year.

The Society’s activity is now much more international. In 2008, the Society had over 3,000 members in countries outside the UK, and over 1,500 were Fellows. The Society also has a strong presence in China, which is reflected in the growing number of Chinese members and Fellows, and the Society’s increasing collaboration with Chinese scientists.

Proc. R. Soc. A is now the Society’s flagship journal, with an impact factor of 1.175. The Society has four other journals: Proc. B (impact factor 1.357) is the Society’s leading generalist journal, and Proc. A (impact factor 1.010) is the Society’s leading mathematics journal. Proc. C (impact factor 1.589) is the Society’s leading environmental science journal, and Proc. D (impact factor 1.046) is the Society’s leading biological science journal.

Proc. R. Soc. A is the Society’s leading journal, with an impact factor of 1.175. The Society has four other journals: Proc.
