2010 Anniversary Series

Macromolecular crystallography at synchrotron radiation sources: current status and future developments
E. M. H. Duke & L. N. Johnson

Research articles

Clutter suppression and classification using twin inverted pulse sonar (TWIPS)
T. G. Leighton, D. C. Finner, P. R. White, C.-H. Chua & J. K. Dix

Reconstruction of potential energy profiles from multiple rupture time distributions
P.-W. Fok & T. Chou

Impingement of liquid jets at atmospheric and elevated pressures: an observational study using paired water jets or water and methylcyclohexane jets
N. Yasuda, R. Yamamura & Y. H. Mori

Natural catalytic activity in a marine shale for generating natural gas
F. D. Mango, D. M. Janvie & E. Herriman

Infinite-dimensional numerical linear algebra: theory and applications
A. C. Hansen

Suppression of curvature in nematic elastica
M. Warner, C. D. Modes & D. Corbett

Time-domain approach to the forward scattering sum rule
M. Gustafsson

Asymptotic formulae for implied volatility in the Heston model
M. Forde, A. Jacquier & A. Mijatović

The square root depth wave equations

Predicting the onset of high-frequency self-excited oscillations in elastic-walled tubes
R. J. Whittaker, M. Heil, O. E. Jensen & S. L. Waters

Neutral shells and their applications in the design of electromagnetic shields
L. P. Liu

On certain sums over the non-trivial zeta zeroes
M. W. Coffey

Hashin–Shtrikman bounds and their attainability for multi-phase composites
L. P. Liu

Towards a dynamical theory of observation
G. Jaroszkiewicz
