Research articles

Scalar evolution equations for shear waves in incompressible solids: a simple derivation of the Z, ZK, KZK and KP equations
M. Destrade, A. Goriely & G. Saccomandi
Classification of Sturm–Liouville differential equations with complex coefficients and operator realizations
J. Qi, Z. Zheng & H. Sun
A ballistic-diffusive heat conduction model extracted from Boltzmann transport equation
M. Xu & H. Hu
Effective constitutive relations for waves in composites and metamaterials
J. R. Willis

Special feature
High-performance computing in the chemistry and physics of materials
S. M. Woodley & C. R. A. Catlow
The decomposition of H2O2 over the components of Au/TiO2 catalysts
A. Thetford, G. J. Hutchings, S. H. Taylor & D. J. Willock
Characterization of hydrogen dissociation over aluminium-doped zinc oxide using an efficient massively parallel framework for QM/MM calculations
T. W. Keal, P. Sherwood, C. Dutta, A. A. Sokol & C. R. A. Catlow
Phase separation and surface segregation in ceria–zirconia solid solutions
The intrinsic interfacial structure of ionic surfactant monolayers at water–oil and water–vapour interfaces
H. Martínez, E. Chacón, P. Tarazona & F. Bresme
A density functional theory study of the adsorption of uracil on the Au(100) surface
S. Irrera & N. H. de Leeuw
Effects of reduced dimensionality on the electronic structure and defect chemistry of semiconducting hybrid organic–inorganic PbS solids
A. Walsh
A computer simulation study of the interaction between passivated and bare gold nanoclusters
M. Lak, M. Plummer, J. Purton & W. Smith
Study of 40-atom Pt–Au clusters using a combined empirical potential-density functional approach
D. T. Tran & R. L. Johnston
Atomic and electronic structure of (X2O3)n nanoclusters; n = 1–5, X = B, Al, Ga, In and TI
S. M. Woodley
Electron and hole trapping in polycrystalline metal oxide materials
K. P. McKenna & A. L. Shluger
An ab initio study of the effect of charge localization on oxygen defect formation and migration energies in magnesium oxide
J. Mulroue & D. M. Duffy
Models of stoichiometric and oxygen-deficient surfaces of subnanoporous 12CaO·7Al2O3
P. V. Subha, A. L. Shluger, Y. Toda, M. Hirano & H. Hosono
Binding of glycaminoglycan saccharides to hydroxyapatite surfaces: a density functional theory study
I. Streiter & N. H. de Leeuw
The initial stages of bioglass dissolution: a Car–Parrinello molecular-dynamics study of the glass–water interface
A. Tilocca & G. N. Cormack
Parallel implementation of the ab initio CRYSTAL program: electronic structure calculations for periodic systems
